

Domus 3

Pressure Relieving Mattress/Overlay

APEX
Care for a Healthy Life

Domus 3:

Pressure Relieving Mattress/Overlay

The Domus 3 is a pressure relieving mattress overlay designed predominantly for the community and home care environments.

The Domus 3 can either be used as a mattress overlay or for instances where the combined height of the overlay and existing foam mattress is an issue, a 7.6CM foam layer can be inserted into a specially designed pocket underneath the mattress. This allows it to be used as a stand alone system which will help enable the user comply with safety side height regulations.

The Domus 3 comes with ventilated micro low air loss cells designed to help with air circulation within the mattress, to aid with infection control and patient comfort.

The Domus 3 dynamic mattress system has a simple to use and intuitive weight setting function, enabling the care giver to simply set the mattress up according to the weight of each patient.

The Domus 3 is a highly versatile and cost effective solution to pressure area care. Its modular construction makes it easy to keep clean and maintain, making it suitable for both the prevention and management of pressure ulcers.

CPR: The CPR toggle is located at the head end of the mattress and is designed to be highly visible in an emergency.

Transport Mode: Transport Mode is designed to be simple and easy to use. Its simple click in design also means it is robust and easy to keep clean.

Air Cells: The air cells modular design means maintenance, replacement and decontamination are easy to carry out. The center section of the mattress features Ventilated Micro Low Air Loss Cells, which are designed to aid air flow within the mattress to help with patient comfort and infection control.

Head Up Control Panel: The control panel on the Domus 3 is specifically designed to be ergonomic and easy to see without the need for the caregiver to change position when using it.

Product Features and Benefits

Alternating Therapeutic Mode: Continuously and sequentially inflates and deflates the air cells to allow for pressure redistribution over a ten minute cycle time.

Low Pressure Alarm: Alerts the caregiver if there is a loss of air pressure in the mattress.

Static Mode: Halts the alternating cycle of the mattress cells so that all cells inflate to the same pressure determined by the patient weight setting. This provides an even surface for the purposes of nursing procedures, after procedures or to act as a step down function before a patient is moved back onto a foam mattress.

Mattress Cover: The cover is flame resistant to BS 7175 Crib 7 and has a host of features to aid with infection prevention including a 360 degree zip, white underside, vapour permeability, antimicrobial properties and is water resistant. The cover is four way stretch to offer greater pressure relief and comfort levels to the patient, it is also possible to launder the cover in a washing machine.

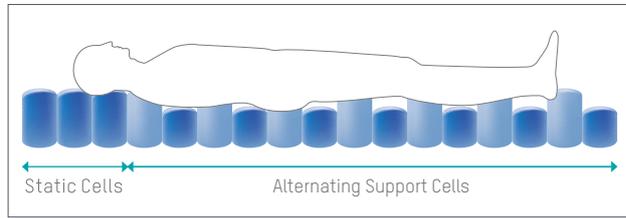

Ventilated Low Air Loss: The center cells are ventilated to increase air flow around the inside of the mattress to aid with patient comfort and infection control.

Mattress Specification	
Mattress Dimensions	: 200x90x12.7 cm
Mattress Weight	: 5.2 KG
CPR	: Highly Visible CPR Toggle
Cable Management	: To allow for safe storage of the power cable
Modular Cell Construction	: For ease of maintenance
Anchoring Straps	: For safe attachment to bed frame or underlaying mattress
Static Head Zone	
Static Mode	
Non-Slip Base	
Seventeen Ventilated Low Air Loss Cells	

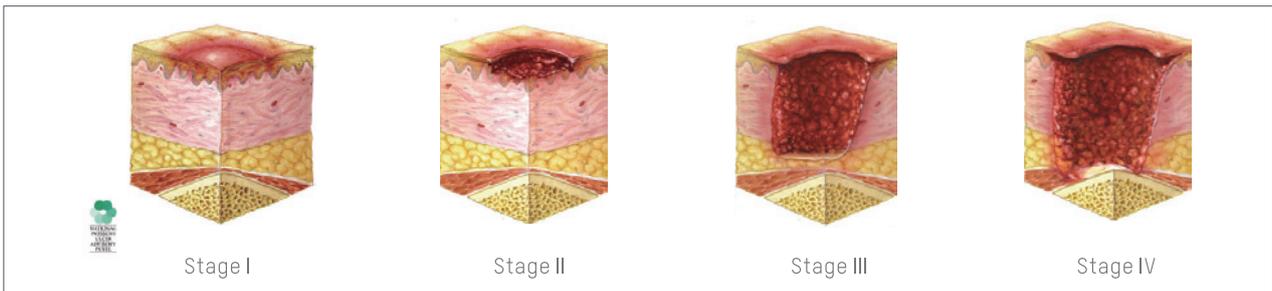

Pump Specification	
Maximum Patient Weight	: 180 KG
Pump Size	: 29x18.5x12.6 cm
Pump Weight	: 2.1 KG
Cycle Time	: 10 minutes
Voltage	: AC220-240V, 50Hz; AC : 120V/60Hz
ABS Cover	: ABS Flame Retardant Pump Cover
Transport Mode	
Hanging Brackets	
Extra Long Power Cable	
Low Pressure Alarm	

Cover Specification	
Flame Resistant BS 7175 Crib 7	
360 Degree Zip	
White Underside of Cover	
Four Way Stretch	
Vapour Permeable	
Water Resistant	
Machine Washable	
Antimicrobial	

Alternating Support Surface
